<u>MINI PROJECT ABSTRACT</u>

1. <u>Freelance Photography website</u>

Freelance photography website is a website that helps photographers to share there works and contacts, so that client can contact them for work. This website will work as an advertisement for the firm. It is a simple way for photographers to promote them by just adding there works that they have already done.

2. <u>Users in the Project</u>

In this freelance photography website, there are mainly three users

- ➢ Admin
- ➢ Photographers
- ➢ Clients

<u>Admin</u>

Admin has the right for manage the whole website.

<u>Photographers</u>

Photographers have the right to add photos, videos and other works done by them.

<u>Client</u>

Client can visit the website and view the works of photographers .They can contact with the photographers and agree the deal for the work.

3. <u>Functionalities</u>

This project contain main functions like the client can search the photographers near to there location. Customers can give rating to the photographers according to there works. They can book photographers according to there needs, in terms of rate and gadgets they use. In the side of admin, he can view and make changes in all pages of photographers and customers. In the side of photographers they can upload photographs and videos.

4. <u>Natural System Studied</u>

Now a days searching for a good photographer is a bit difficult task. Usually we contact the nearest studio and accept the rate they says, but in this system we can contact with different photographers and accepts according to the rate and other requirements that we need.

5. <u>Designed System</u>

The freelance photography website helps the customers to select good photographers for an event according to there budget.

Currently there is no such platform for photographers for show there talent and to make it as a way of life.

6. <u>Technologies Used</u>

Front-end: HTML, CSS

Back-end: PHP

7. <u>Weekly Plan</u>

Creating a module and its functionalities in each week.
